

SIGN HANGING SYSTEMS

SIGN HANGING SYSTEMS

As a product specialist in the field of hanging concepts, Artiteq has been developing flexible hanging systems for paintings, presentation materials and signage within a building from Tilburg (NL) since 1995.

In addition to our core range of picture hanging systems, Artiteq offers a diverse range within Signing. For safe and correct hanging of panels, signing and signage within a building. In schools, hospitals and (larger) office buildings, for example, it is important that classrooms, escape routes, toilets and floors are properly indicated. As a hanging specialist, Artiteq offers several signing products to hang the signage in a simple and appropriate way.

In this brochure we explain the products and show the product range. The choice for which system depends on the situation, where it will be hung and what kind of ceiling or wall it is.

SIGN HANGING SYSTEMS

Artiteq has selected the Fischer UX 5x30 R plug to be used in combination with its hanging systems. The Fischer UX 5x30 R plug can be used in different kinds of materials, such as concrete, stone and plasterboard. Depending on the material, the plug can support a maximum load of 30 kg. The drill used with the plug must have a diameter of 5 mm. The plug is 30 mm in length. The screw used with the plug is 38 mm long and has a diameter of 3.5 mm (to be used in combination with a PZ2 bit).

Maximum load

To determine the maximum load of a signing hanging system, it must be known what type of mounting materials will be used and what surface (i.e. type of material) these will be attached to. The components of the signing hanging system all have a maximum bearing capacity. This is the maximum bearing capacity for the component itself and not the maximum bearing capacity that must be taken into account for the system as a whole. For the whole system, not only the load capacity of the mounting material, but also the load capacity of the material to which the mounting material is to be attached have to be taken into account.

For every signing hanging system, the weight that you wish to hang must be balanced against the maximum load capacity of the mounting material. If systems are hung from other hanging components, such as recessed ceilings, you have to know the maximum load of this hanging component before fitting our systems. The tables below show the maximum load capacity for the Fischer plug in combination with different materials and the maximum bearing capacity for each component for the different signing hanging systems.

TYPE		UX 5X 30	
RECOMMENDED LOADS IN THE RESPECTIVE BASE MATERIAL F _{REC} ²⁾			
Concrete	≥ C20/25	[kN]	0,30
Solid brick	≥ Mz 12	[kN]	0,20
Perforated sand-lime brick	≥ KSL 12	[kN]	0,30
Vertically perforated brick	≥ Hlz 12	[kN]	0,20
Aerated concrete	≥ AAC 4	[kN]	0,15
Gypsum plasterboard	12,5 mm	[kN]	0,10
Gypsum plasterboard	25 mm	[kN]	0,10
Gypsum fibreboard	(Fermacell)	[kN]	0,20
Gypsum block	ρ ≥ 0,9 kg/dm ³	[kN]	-

- 1 Required safety factors are considered.
- 2 Valid for tensile load, shear load and oblique load under any angle
